

Cedar LNG Project News

Canadian energy produced responsibly

Cedar LNG is a proposed export facility in Kitimat, British Columbia, within the traditional territory of the Haisla Nation. Powered by electricity from BC Hydro, it will be one of the lowest carbon intensity liquefied natural gas (LNG) facilities in the world.

The project will use Canada's rich natural gas supply and BC's growing liquefied natural gas infrastructure to produce low-carbon, low-cost Canadian liquefied natural gas for Asia-Pacific markets.

Why a floating facility?

By proposing a floating liquefied natural gas facility, Cedar LNG has minimized its footprint and local area disturbance. Since the original design was drafted, the site has been optimized, further reducing environmental impacts to land, vegetation, and animal species.

Project Updates

The project is in the environmental assessment phase. This stage includes a formal public comment period and continued engagement with the local community and Indigenous Nations, the public, government and other key stakeholders.

What's been happening?

- Over the last several months, the project team has had the opportunity to meet with local municipal governments and stakeholders from across the Kitimat and Terrace region. Outreach will continue with stakeholder engagement sessions through the winter.

What's coming up?

- The Environmental Assessment (EA) submission is scheduled for February 2022.
- Consultations continue with stakeholders in the region including community open houses, planned for March 2022.
- Oil and gas permit applications are in process.
- For more detail on the EA process, visit cedarlng.com

Project partners

The Haisla Nation-owned project is a partnership with Pembina Pipeline Corporation (Pembina). It will be the largest First Nation-owned infrastructure project in Canada, creating jobs, contracting and other economic opportunities for the Haisla Nation, the community of Kitimat, neighbouring Indigenous Nations, and the local region. The Cedar LNG project is an opportunity to demonstrate economic reconciliation in action, as it aims to connect Indigenous Nations, industry and government for mutual economic and social benefit.

Meet members of the Cedar LNG team

Doug Arnell, CEO

Doug has close to 30 years of energy industry experience. As the former CEO of Golar LNG, Doug developed more than three billion dollars' worth of floating liquified natural gas assets – including the world's first commercially operating floating production vessel.

Doug has served as a director on many public company boards and held senior positions with Canada's leading energy companies. He has a Bachelor of Science in Mechanical Engineering from the University of Calgary.

Michael Eddy, External Affairs Director

Michael Eddy is no stranger to Kitimat. You might remember him as the previous Head of Indigenous Relations for LNG Canada.

For many years he worked closely with Indigenous communities on the Northwest Coast. Now he's excited to be working with the Haisla Nation once again, to support them on the historic Cedar LNG Project. Michael looks forward to reconnecting with friends and colleagues across the region.

Our thanks to Jon Turner

The Cedar LNG team would like to thank Jon Turner for his extensive work in building relationships with many Indigenous Nations, partners, and stakeholders across the Kitimat, Terrace, and Prince Rupert region. While Jon's work has concluded, Michael will continue to build on Jon's contributions. We wish Jon all the best!
