

Upcoming construction work

As Cedar LNG progresses with construction at its project site, we are committed to sharing updates about our activities with the community. In late April, Cedar LNG will be conducting geotechnical work in the marine terminal area.

Geotechnical surveys

- **When:** April 24-29, 2025.
- **Where:** Directly in front of the Cedar LNG marine terminal site on Douglas Channel.
- **What:** As we continue to engineer the mooring system that will connect the floating LNG facility to the shore, we will be doing geotechnical surveys on the water to better understand the seabed for mooring anchor placement. You may see us aboard a small vessel that is moving back and forth in front of the site. We do not anticipate any excessive noise associated with this work.

Community Feedback Program

Share feedback, receive answers to questions, and have concerns addressed in a timely way. You can reach out using the method that works best for you.
