

Upcoming construction work

As Cedar LNG progresses with construction, we are committed to sharing updates about our activities with the community. Cedar LNG is preparing to begin additional geotechnical work in the Douglas Channel in July/August. This is a continuation of similar work performed in late April 2025.

Geotechnical surveys

- **When:** An approximately six-to-eight-day period between July 15 and August 15, 2025.
- **Where:** On Douglas Channel, approximately 1,000 metres offshore from the Cedar LNG Marine Terminal Area.
- **What:** As engineering work continues in relation to the mooring system, we will complete additional geotechnical work to better understand the seabed for the mooring anchor design. You may see a stationary work boat near the marine terminal for approximately six-to-eight days. We do not anticipate any excessive noise associated with this work.

Community Feedback Program

Share feedback, receive answers to questions, and have concerns addressed in a timely way. You can reach out using the method that works best for you.
